WPI; 2004-082489/08. N-PSDB; ADH48413. New human kinases and phosphatases (KPP) polypeptide, useful for preparing a composition for treating a disease associated with decreased expression or overexpression of functional KPP e.g., cancer.

Claim 1; SEQ ID NO 22; 336pp; English.

The invention relates to novel isolated human kinases and phosphatases (KPP) polypeptides. A protein of the invention has cytostatic, anorectic, and immunosuppressive activity, and acts as a KPP-Antagonist, or KPP-Agonist. A polymuclectide of the invention may have a use in gene therapy. The polypeptide is useful for preparing a composition for

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human clasmostic and therapeutic polynucleotides (dithp) or polyneptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine of autoimmune/inflammatory disorder, developmental disorders, or disorder, neurological disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp concleules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention relates to novel diagnostic and therapeutic polymucleotides selected from one of the 2722 sequences defined in the specification. A polymucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polymucleotides (dithp) or polymeptides may be cused to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine of autoimmune/inflammatory disorder, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp conditions may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KICDFGLARIADPEHDHTGFLTEYVATRWYRAPEIMLNSKGYTKSIDIWSVGCILAEMLS 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MAAAAAQGGGGGEPRRIEGVGPGVPGEVEMVKGQPFDVGPRYTQLQYIGEGAYGMVSSAY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel isolated polypeptide (I) comprising ar amino acid sequence selected from sequences comprising 135 or 359 ami acids (ADW12901 or ADW12903) or its fragments. The polypeptides and polymucleotides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SWAPK3 gene in a mammal. The fragments of the polypeptides and polymucleotides can also be used as primers or probes. This sequence corresponds to the SWAPK3V1 variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Fragments of this sequence (such as AAW15501) are recognition esquences for the antibodies of the invention. The antibodies of the invention. The antibodies of the invention. The antibodies of the invention are 1gG type monoclonal antibodies (WAb) generated by using human ERK1 as an immunogen and are capable of binding to ERK1 at the binding to buman or rat MAP kinase ERK2. Or rat MAP kinase ERK1 at mammal control of the antibodies can be used for detecting or assaying MAP kinases. They can be used for detecting or assaying MAP kinases. They can be used for detecting or assaying MAP kinases. They can be used for dispassing MAP kinases. Such as cancerassociated diseases (e.g. brain tumour), metabolic dispasses (e.g. asthma, pollenosis, atopic dermatitis), central nervous dispasses (e.g. asthma, pollenosis, atopic dermatitis), central nervous system diseases (e.g. Alzheimer's disease, Parkinsonism, senile dementia) and bone/joint diseases (e.g. rheumatism). They can also be used to investigate the role of MAP kinases in-vivo and the mechanism of drug action. The antibodies specific for various types of MAP kinases. By using antibodies specific for various types of MAP kinase, the activity sensitivity to the exclusion of other species of MAP kinase
                                                                                                                                                                                                                                                                                            Antibody; MAP kinase; human; mitogen activated protein; lymphoid cell; recognition sequence; 1gg(; immunogen; rat; BRK2; hybridoma; spleen cell; MAP kinase-related disease; cancer-associated disease; brain tumour; metabolic disorder; diabetes mellitus; circulatory disease; rheumatism; arteriosclarosis; allexigic diseases; central nervous system disease; asthma; Alzheimer's disease; parkinson's disease; senile dementia; BRK1; bone/joint disease; pollenosis; atopic dermatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibodies to human MAP kinase - used for the detection, assay and purification of various MAP kinase species.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and extostatic activity. The polymocleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and central nervous system disease, such as a localised neuropathies and central nervous system disease, such as alateral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and therapy, drug screening, assaays for receptor activity, arthritis and inflammation, leukaemias and C. N. S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                316

The invention relates to identifying an agent to be tested for ability to treat psychotic disorder in patient. The method involves contacting cells of tissues with a candidate drug, and determining levels of phosphorylation of intracellular signaling proteins DARPP-32 (dopamineregulated phosphoprotein), ERK1 and ERK2 (extracellular signal-regulated protein kinases 1 and 2), and CREB (CAMP-response element binding protein). The method is useful for identifying an agent to be tested for an ability to treat a psychotic disorder such as schizophrenia in a patient in need of such treatment. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for identifying a ligand (L), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   259 --ALDLIDRMLTFNPNKRITVEEALAHPYLEQYYDPTDEPVAEEPFTFAMELDDLPKERL 316

The present invention relates to identifying and obtaining a compound useful in the prevention or treatment of cardiac diseases, comprising quantification of the activity of Raf-1, MEX1/2 and/or Erk1/2 depending compound. The method is useful for identifying and/or obtaining compounds that may be used in the prevention or treatment of cardiac diseases, particularly congestive heart failure. The compound or protein is also used for the preparation of a pharmaceutical composition for prevention or treatment of a disease related to hypertrophy or impaired or increased activation of telethonin (T-Cap), kagri-actinin, MHC, actin, composition for a proponin, Erk1/2 and/or MLCK. The protein or antibody which specifically recognizes the activated/phosphorylated form of the above polypeptide, is used for the preparation of a composition for diagnosing a disease or a predisposition of composition for diagnosing a disease or a predisposition contration of Raf-1, MEX1/2 and/or Erk1/2. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying and/or obtaining a compound useful for preventing or treating cardiac diseases, particularly congestive heart failure, comprises quantification of the activity of Raf-1, MEX1/2 and/or Erk1/2 depending on the compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MAAAAAQGGGGEPRRTEGVGPGVPGEVEMVKGQPFDVGPRYTQLQYIGEGAYGMVSSAY

This invention relates to a novel use of biochemical pathways for identifying a mammalian glioma tumour that is likely to respond to an epidermal growth factor receptor (EGFR) polypeptide inhibitor or an mTOR polypeptide inhibitor, or identifying a mammalian glioma tumour that does not express or expresses a PTEN polypeptide and which is likely to respond or not likely to respond to an inhibitor of mTOR polypeptide activity, respectively. The biochemical pathways are, in particular, disregulated in pathologies such as cancer. The present sequence is that of the human ERK protein which may be used in the method of the invention.

```
This invention relates to a novel method for determining or predicting the response of a patient to HER-2 directed therapy. Specifically, it refers to analysing a mammalian tumour in order to detect a pattern of expression and or phosphorylation of a protein taken from the group including insulin growth factor receptor (IGFR) polypeptide, epidermal growth factor receptor (EGFR), phosphorylated SG ribosomal protein, phosphorylated AKT, phosphorylated NDF or phosphorylated ERK protein. The present invention describes characterising a mammalian tumour's responsiveness to an HER-2 therapy and hence an individual's response to this cancer therapy, using an immunologically specific antibody directed against one of the aforementioned proteins. Furthermore, it provides therappeutic agents targeted to HER-2/neu. This polypeptide sequence is the human phosphorylated ERK protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The invention relates to a novel method for identifying a mammalian tumor responding to HER2-directed therapy, where the tumor overexpresses HER2. The method involves assaying a sample obtained from the mammalian tumor to detect a pattern of expression and/or phosphorylation of one or several polypeptide, exhibit receptor (EGFR) polypeptide, neu differentiation factor (NDF) polypeptide, net detected pattern of expression, phosphorylation or both expression and phosphorylation identifies mammalian tumors that respond to HER2-directed therapy. The method of the invention is useful for identifying a mammalian tumor that responds to a HER2-directed therapy, the method of the invention is useful for identifying a mammalian tumor that responds to a HER2-directed therapy, the method is useful for determining or molecule targeting HER2. The method is useful for determining or molecule targeting response to the method is useful for determining or present speediction of responds therapy in an individual. The method canables prediction of response in cancer subjects to cancer therapy. The present sequence represents the human ERK protein used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                   Identifying mammalian tumor responding to HER2-directed therapy, involves assaying sample from tumor to detect expression and/or phosphorylation of insulin-like growth factor receptor polypeptide/erbB1 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 DHVRKTRVAIKKISPFEHQTYCQRTLREIQILLRFRHENVIGIRDILRASTLEAMRDVYI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel isolated polypeptide (I) comprising a amino acid sequence selected from sequences comprising 335 or 359 am acids (ADW12901 or ADW12903) or its fragments. The polypeptides and polypucleotides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SMAPK3 gene in a mammal. The fragments of the polypeptides and polynucleotides can also be used a primers or probes. This sequence corresponds to the SMAPK3V1 variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       44;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosupplessant and cytochatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous injuries, peripheral nervous coalised neuropathy and localised neuropathies and central nervous system diseases, such as a linearies of the activities and shy-brager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemoteactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
Example 2; SEQ ID NO 5471; 10078pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Search

ACAGONICATE AND CAPEGORD REAL MANAGE SEXTRACELLULAR SIGNAL-requiated kinase
N.Alternate names: ERKI-NAP kinase; extracellular signal-requiated kinase
C.Species: Ratus norregicus (Norway rat)
C.Date: 30-Sep-1993 #sequence revision 31-Sep-1993 #text_change 09-Jul-2004
C.Date: 30-Sep-1993 #sequence revision 31-Sep-1993 #text_change 09-Jul-2004
R.Marquardt, B.; Stabel, S.
Gone: 120, 297-299, 1992
A.FILE: Sequence of a rat cDNA encoding the ERKI-MAP kinase.

extracellular signal-regulated kinase (BC 2.7.-.-) 1 - common carp

NyAlternate names: CERKI

C;Species: Cyprinus carpio (common carp)

C;Accession: JW0052

R;Hashimoto, H: Yokoyama, Y: Matsuo, Y: Toyohara, H:; Kohno, M:; Sakaguchi, M:

J. Blochem. 123, 1031-1035, 1998

A;Title: Existence of two isoforms of extracellular signal-regulated kinase in fish.

A;Reference number: JW0052; MUID:98269030; PMID:9603989

A,Accession: JW0052

A,Accession: JW0052

A,Residues: 1-392 < HAS>

A;Residues: 1-392 < HAS>

A;Comment: This enrayme is the key enzyme in the intracellular signal transduction pathway

C;Superfamily: kinase-related transforming protein; protein kinase homology

C;Keywords: phosphotransferase

F;54-344/Domain: protein kinase homology <KIN>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       182

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 11

A39754
mitogen-activated protein kinase (EC 2.7.1.-) - African clawed frog
N;Alternate names: M phase MAP kinase
C;Species: Kenpous laevis (African clawed frog)
C;Species: Kenpous laevis (African clawed frog)
C;Species: Xenpous laevis (African clawed frog)
C;Species: Xenpous laevis (African clawed frog)
C;Species: Xenpous laevis (African clawed frog)
C;Date: 07-Feb-1922 #sequence_revision 07-Feb-1922 #text_change 09-Jul-2004
